June 2018

**Timothy Long
Year 11**

Timothy Long
June 2018

Pastoral Care

Teacher's Comment

Timothy is a mature and diligent student who has achieved some outstanding results this semester. Academically he has worked to a high standard and achieved many outstanding results, namely in Mathematics and Economics. In each of these subjects Timothy has worked hard to learn the content and apply it using the appropriate skills. In order to improve, he is encouraged to write and revise detailed study notes and submit draft responses. During Pastoral Care this semester, the College has continued with our Student Wellbeing Program, 'Growing Capacity', Year 11 have explored topics such as 'Lead in your Life' and 'Building my Future'. Students have undertaken these topics as they have started the senior years of College. Year 11 have considered the implications of leadership and the approach towards this for their own life and leading in society. They were encouraged to establish themselves as a community, and to create a satisfying and meaningful life, which requires determination, hard work and a positive outlook. The themes explored in these topics are specifically aimed at enhancing Student Wellbeing beyond College life. In Christian Studies this semester, Timothy has completed an in-depth text study of a section of 1 Corinthians and has begun to explore the impact that worldview can have on belief in everyday life. He has been regularly involved in these discussions and his contributions are valued by the class. Timothy can be pleased with most aspects of this report and is encouraged to continue his positive approach to learning.

Extra Curricular Activities

Days Absent: 1

Mr N Lindeback
Pastoral Care Teacher

Mr R. Whelan
Principal

The tasks reported on this report are the tasks detailed in the assessment booklet which was sent home earlier this year. For details of these tasks refer to the booklet.

English Advanced Year 11

Course Outline

Students in English Advanced have undertaken the mandatory Common Module 'Reading to Write' by exploring the notion of landscape in the poetry of Judith Wright and a number of related texts. As part of this Module students produced a Portfolio that allowed them to develop their analytical and creative writing responses. Students have also commenced Module A 'Narratives that Shape our World' which will be assessed in Term 3.

Task	Mark	Weight
Portfolio and Reflection	80%	30.00

Cumulative Rank: 22/95

Social Development	R	S	U	Commitment to learning	R	S	U
Works cooperatively			✓	Completes tasks in class			✓
Interacts well with teachers and students			✓	Listens attentively and follows instructions			✓
Is self motivated			✓	Brings equipment to class			✓
Demonstrates organisational ability			✓	Completes homework			✓

R = Rarely; S = Sometimes; U = Usually

Teachers Comment:

Timothy is a diligent student who has made pleasing progress in English Advanced across the semester. He has adapted well to the demands of senior studies, exhibiting an ability to complete all tasks to a high standard. Timothy's Portfolio and Reflection displayed his well-developed understanding of how a text's setting is constructed to convey complex ideas. He was able to incorporate detailed textual evidence into his analytical responses to support the arguments presented. Timothy's piece of imaginative writing reflected an effective ability to construct a significant landscape to symbolically explore notions of human experience. While he experimented with structure and perspective in an effective way, his response could have benefited increased figurative description. Timothy is commended for his diligent approach and should continue to progress provided he maintains a consistent routine of drafting and applying feedback.

Mrs A Driscoll

Mathematics Year 11

Course Outline

This semester, students have studied Basic Arithmetic & Algebra and explored the processes, proofs and geometrical properties that are encompassed by Plane Geometry. They have also used formulae and algebraic methods associated with Linear Functions and graphed a variety of relations and functions correlating to the Real Functions topic. Students have completed a Common Test which has been used to assess the syllabus outcomes set by NESA.

Task	Mark	Weight
Common Test	100%	35.00

Cumulative Rank: 1/48

Social Development	R	S	U	Commitment to learning	R	S	U
Works cooperatively			✓	Completes tasks in class			✓
Interacts well with teachers and students			✓	Listens attentively and follows instructions			✓
Is self motivated			✓	Brings equipment to class			✓
Demonstrates organisational ability			✓	Completes homework			✓

R = Rarely; S = Sometimes; U = Usually

Teachers Comment:

Timothy is an enthusiastic and conscientious student. He completes independent work efficiently and to the best of his ability at all times. Timothy performed perfectly in the Common Test demonstrating a comprehensive understanding of the Plane Geometry, Arithmetic and Algebra topics tested. In order to maintain this high standard, he is encouraged to increase his familiarisation with HSC questioning techniques.

Mr D Butler

Mathematics Extension 1 Year 11

Course Outline

This semester, Year 11 Mathematics Extension 1 students have covered work on Harder Inequalities, Permutations & Combinations, Circle Geometry, Division of an Interval into a given Ratio and the Angle between Two Lines. Students have also encountered questions involving Harder Mathematics techniques. Students have completed a Common Test which has been used to assess the syllabus outcomes set by NESA for each of the above units of work.

Task	Mark	Weight
Common Test	77%	20.00

Cumulative Rank: 7/25

Social Development	R	S	U	Commitment to learning	R	S	U
Works cooperatively			✓	Completes tasks in class			✓
Interacts well with teachers and students			✓	Listens attentively and follows instructions			✓
Is self motivated			✓	Brings equipment to class			✓
Demonstrates organisational ability			✓	Completes homework			✓

R = Rarely; S = Sometimes; U = Usually

Teachers Comment:

Timothy is commended for the way he has engaged in his learning of Mathematics Extension and sought assistance when his understanding has been challenged. He performed well in the Common Test and demonstrated considerable skill in solving and graphing inequalities. Timothy would benefit from further review of the Circle Geometry and Permutations & Combinations topics in order to improve further. He is encouraged to maintain his diligence and to adopt a regular program of revision which utilises a variety of resources to strengthen his understanding.

Mr D Butler

Chemistry Year 11

Course Outline

This semester, students have been investigating elements, compounds and mixtures. They have related the properties of these substances to their uses, and have used the atomic theory and electron configuration to explain these properties. Students have used mathematical models and equations to solve quantitative problems in Chemistry, including those using the mole concept, Avogadro's number and the stoichiometry of chemical equations. A depth study on Nuclear Chemistry was completed, which included an analysis of first-hand data on pollution levels in Richmond, measured using the radioisotope Radon-222.

Task	Mark	Weight
Depth Study 1	95%	30.00

Cumulative Rank: 3/38

Social Development	R	S	U	Commitment to learning	R	S	U
Works cooperatively			✓	Completes tasks in class			✓
Interacts well with teachers and students			✓	Listens attentively and follows instructions			✓
Is self motivated			✓	Brings equipment to class			✓
Demonstrates organisational ability			✓	Completes homework			✓

R = Rarely; S = Sometimes; U = Usually

Teachers Comment:

Timothy is an outstanding student who has worked very hard throughout the semester to achieve excellent results. In the Depth Study on Nuclear Chemistry, Timothy manipulated first-hand data to draw pivot tables and graphs. He used these to analyse pollution levels in Richmond. Timothy thoroughly discussed a range of similarities and differences between nuclear reactors and cyclotrons in the production of nuclear medicines. He explained the production process of Technetium-99m and used flowcharts to present the information. Timothy analysed the effectiveness of the use of this isotope in terms of its environmental impact, its distribution and impact on society. He would benefit from applying himself consistently to the task at hand, minimising distractions in the classroom and consolidating his learning with a rigorous revision schedule.

Miss M Hanna

Economics Year 11

Course Outline

During this semester, Year 11 Economics students have been studying the operation of the Market System. This unit focused on foundational concepts such as opportunity cost as well as building models of supply and demand. The students applied these models to Labour and Finance markets and analysed recent trends in the Australian economy.

Task	Mark	Weight
Stimulus Based Task	100%	30.00

Cumulative Rank: 1/15

Social Development	R	S	U	Commitment to learning	R	S	U
Works cooperatively			✓	Completes tasks in class			✓
Interacts well with teachers and students			✓	Listens attentively and follows instructions			✓
Is self motivated			✓	Brings equipment to class			✓
Demonstrates organisational ability			✓	Completes homework			✓

R = Rarely; S = Sometimes; U = Usually

Teachers Comment:

Timothy has applied himself diligently and this is reflected in his performance in Economics. In the Stimulus Based Task, he achieved an excellent result by comprehensively synthesising his understanding with stimulus material. Timothy analysed an appropriate government intervention in the market for petrol that addressed the identified issues. He should try to develop his writing skills to make his ideas and arguments clearer. Timothy is encouraged to work on his economic terminology by creating a glossary as part of his revision next semester.

Mr M Roper

Legal Studies Year 11

Course Outline

In Preliminary Legal Studies, students have been introduced to the basic legal concepts that underpin the Australian Legal System and the way in which the law impacts individuals. They have considered the value base of laws, how laws are passed by parliament and the many sources of law in the Australian Legal System. Students contrasted the criminal and civil law systems and were introduced to Aboriginal customary law, international law and the processes of law reform. Students have explained the interrelationships between the rights and responsibilities of Australian citizens and how those rights are legally enforced and how disputes are resolved.

Task	Mark	Weight
Research and Oral Presentation	87%	30.00

Cumulative Rank: 11/50

Social Development	R	S	U	Commitment to learning	R	S	U
Works cooperatively			✓	Completes tasks in class			✓
Interacts well with teachers and students			✓	Listens attentively and follows instructions			✓
Is self motivated			✓	Brings equipment to class			✓
Demonstrates organisational ability			✓	Completes homework			✓

R = Rarely; S = Sometimes; U = Usually

Teachers Comment:

Timothy engages with his learning in class and collaborates well with others. In the Research and Oral Presentation, he demonstrated an extensive understanding of Dietrich v The Queen and the associated legal issues it raised. Timothy presented a logical and cohesive speech using relevant legal terminology and concepts. He could have improved his result by including more evidence in support of his argument. Timothy is encouraged to practise integrating cases and media articles in extended responses as part of a regular pattern of revision.

Mr M Roper

Physics Year 11

Course Outline

This semester, students have been studying the modules Kinematics and Dynamics. They have looked at scalar and vector quantities and how to apply them to the movement of various objects. Students have used mathematical equations to determine variables such as velocity, acceleration, displacement and time. They have also looked at the role forces play in the movement of objects. Students have investigated elastic and inelastic collisions with respect to the concepts of energy, momentum and impulse in closed systems.

Task	Mark	Weight
Practical Task	93%	30.00

Cumulative Rank: 4/20

Social Development	R	S	U	Commitment to learning	R	S	U
Works cooperatively			✓	Completes tasks in class			✓
Interacts well with teachers and students			✓	Listens attentively and follows instructions			✓
Is self motivated			✓	Brings equipment to class			✓
Demonstrates organisational ability			✓	Completes homework			✓

R = Rarely; S = Sometimes; U = Usually

Teachers Comment:

Timothy is a conscientious Physics student who has demonstrated extensive practical skills in the course this semester. In the Practical Task, he was able to design a sound method to test a given hypothesis. Timothy was also able to collect reliable data and appropriately use tables and graphs to analyse his results. He clearly discussed the limits of precision for the equipment used in the task and explained how he limited sources of error. Timothy could improve the method of his investigations by considering techniques that will improve its reliability and by providing more detail to the description of the experimental setup. He is encouraged to develop a rigorous study routine that includes writing detailed summary notes and uses practice questions to develop the quality of his written responses.

Mr M Strong

Thomas Hassall Anglican College Final Report

September 2018

**Timothy Long
Year 11**

Pastoral Care

Teacher's Comment

Timothy is a diligent and hardworking student who has achieved outstanding results this semester. Academically he has worked to a high standard and achieved many excellent results, namely in Legal Studies, Mathematics, and Physics. In each of these subjects Timothy has worked hard to learn the content and apply it using the appropriate skills. In order to improve across all subjects, he is encouraged to revise past HSC questions and continue applying himself well in class. During Pastoral Care classes this term, Year 11 continued with the Student Wellbeing Program, 'Growing Capacity', and engaged in the unit, 'Making a Difference'. Timothy worked in a group to identify and explore an issue that affects our society and created a campaign that could bring awareness to this issue. The unit allowed students to apply their personal strengths as they worked as a team to make a difference. He also reflected on his learning and set goals for future success through the Tracking Learning Program. In Christian Studies this semester, Timothy participated in a series of seminars related to worldviews, including a Christian worldview, that influence an individual's participation in communities in today's culture. He has been regularly involved in discussions and his contributions are valued by the class. Timothy is encouraged to think deeply about how Christian spirituality may impact how he makes sense of the world and contributes positively towards it. He has been actively involved in College life as seen in his role as College Prefect.

Extra Curricular Activities

College Prefect 2018 - 2019

Days Absent: 1

Mr N Lindeback
Pastoral Care Teacher

Mr R. Whelan
Principal

The tasks reported on this report are the tasks detailed in the assessment booklet which was sent home earlier this year. For details of these tasks refer to the booklet.

English Advanced Year 11

Course Outline

In Semester 2, students in the English Advanced course have undertaken a study of a range of narratives, including Robert Stevenson's 'Strange Case of Dr Jekyll and Mr Hyde', for Module A: Narratives that Shape our World. For this Module, students were required to create a Multimodal Presentation containing analysis of two texts in relation to their contexts. Students completed the English Advanced course with a Critical Study of Literature on William Shakespeare's 'Othello', and were assessed on their interpretation of the text in the Final Examination.

Task	Mark	Weight
Portfolio and Reflection	80%	30.00
Multimodal Presentation	87%	30.00
Final Examination	77%	40.00

Cumulative Rank: 12/95

Grade: B

Social Development	R	S	U	Commitment to learning	R	S	U
Works cooperatively			✓	Completes tasks in class			✓
Interacts well with teachers and students			✓	Listens attentively and follows instructions			✓
Is self motivated			✓	Brings equipment to class			✓
Demonstrates organisational ability			✓	Completes homework			✓

R = Rarely; S = Sometimes; U = Usually

Teachers Comment:

Timothy is a hardworking student who has made pleasing progress in English Advanced, exhibiting consistent application throughout the course. He constructed an effective Multimodal Presentation which explored how societal flaws are exposed through selected narratives. In the Final Examination, Timothy exhibited a solid understanding of topics set for study. His short answer responses demonstrated an ability to interpret previously unseen texts, but some responses lacked sufficient analysis of techniques and their contribution to textual meaning. Timothy was able to undertake thoughtful analysis in his essay on 'Othello', however, the response could have been strengthened by making stronger links to the context of production. Timothy is commended for his strong work ethic and should continue to improve as he commences the HSC course, provided he attempts written responses under timed conditions and undertakes regular revision to solidify his content knowledge.

Mrs A Driscoll

Mathematics Year 11

Course Outline

This year, students in the Year 11 Mathematics Course have studied Basic Arithmetic & Algebra, Plane Geometry, Linear Functions, Real Functions, Trigonometric Ratios, The Quadratic Polynomial & the Parabola and The Tangent to a Curve & the Derivative of a Function. These topics were formally assessed by three assessment tasks. All of the topics and assessment tasks have been created in conjunction with the outcomes established by the NSW Education Standards Authority.

Task	Mark	Weight
Common Test	100%	35.00
Assignment	94%	30.00
Final Examination	96%	35.00

Cumulative Rank: 3/47

Grade: A

Social Development	R	S	U	Commitment to learning	R	S	U
Works cooperatively			✓	Completes tasks in class			✓
Interacts well with teachers and students			✓	Listens attentively and follows instructions			✓
Is self motivated			✓	Brings equipment to class			✓
Demonstrates organisational ability			✓	Completes homework			✓

R = Rarely; S = Sometimes; U = Usually

Teachers Comment:

Timothy has demonstrated a willingness to achieve mastery over the concepts introduced in Mathematics. In the Final Examination, he performed wonderfully and answered questions related to all topics brilliantly. Timothy is encouraged to continue applying himself diligently and to seek assistance whenever his understanding is incomplete.

Mr D Butler

Mathematics Extension 1 Year 11

Course Outline

This year, students in the Year 11 Mathematics Extension 1 course have studied Harder Inequalities, Permutations & Combinations, Circle Geometry, Internal & External Division of Lines into Given Ratios, Angles Between Two Lines, Further Trigonometry, Polynomials, Parametric Representation and Harder Applications of the Preliminary 2 Unit Course. These topics were formally assessed by three assessment tasks. All of the topics and assessment tasks have been created in conjunction with the outcomes established by the NSW Education Standards Authority.

Task	Mark	Weight
Common Test	77%	20.00
Assignment	95%	10.00
Final Examination	60%	20.00

Cumulative Rank: 4/22

Grade: B

Social Development	R	S	U	Commitment to learning	R	S	U
Works cooperatively			✓	Completes tasks in class			✓
Interacts well with teachers and students			✓	Listens attentively and follows instructions			✓
Is self motivated			✓	Brings equipment to class			✓
Demonstrates organisational ability			✓	Completes homework			✓

R = Rarely; S = Sometimes; U = Usually

Teachers Comment:

Timothy applies himself diligently in class, responds well when called upon to explain his methods and always remains up to date with his work. He performed well in the first two assessment tasks for this course. However, in the Final Examination, Timothy experienced some difficulty with the breadth of topics being tested and the conceptual nature of some questions. He performed wonderfully in the multiple choice section, only dropping two marks, and in the short response section he successfully answered questions related to solving algebraic equations using substitution, deriving the equations of tangents for a parabola in parametric form and finding their point of intersection, solving trigonometric equations in general form, completing a circle geometry proof and finding the equation of a line in a plane geometry problem. Significant review of the Plane Geometry, Polynomials, Permutations & Combinations and Further Trigonometry topics needs to be undertaken. Timothy is commended on his consistent approach towards the study of Mathematics Extension.

Mr D Butler

Chemistry Year 11

Course Outline

This semester, students have been investigating a range of chemical reactions. They have carried out an extensive range of reactions in the laboratory, learning how to predict the products of these reactions, and write balanced chemical equations. Calculations involving galvanic cells and redox reactions have been carried out, as well as predicting which metals are more easily oxidised than others. In the Thermodynamics module, students have looked at systems, surroundings and the universe in relation to heat transfer. The enthalpy, entropy and Gibbs free energy of such systems have also been addressed and students have learned to calculate these values using data, formulae, and application.

Task	Mark	Weight
Depth Study 1	95%	30.00
Depth Study 2	71%	30.00
Final Examination	75%	40.00

Cumulative Rank: 6/38

Grade: B

Social Development	R	S	U	Commitment to learning	R	S	U
Works cooperatively			✓	Completes tasks in class			✓
Interacts well with teachers and students			✓	Listens attentively and follows instructions			✓
Is self motivated			✓	Brings equipment to class			✓
Demonstrates organisational ability			✓	Completes homework			✓

R = Rarely; S = Sometimes; U = Usually

Teachers Comment:

Timothy has demonstrated a very good understanding of chemical concepts and calculations. He actively participates in all activities and has displayed a consistent effort in both group work and individual tasks. In the Depth Study on Reactive Chemistry, Timothy analysed his practical investigations to interpret their validity, reliability and accuracy. He wrote accurate redox equations and drew a scientific diagram of a galvanic cell constructed in class. Timothy would benefit from suggesting detailed improvements to the scientific method, and by using his data sheet to extract and use information in complex calculations. In the Final Examination, he demonstrated a good knowledge of molecular structure, energy diagrams of exothermic reactions and periodic trends of metals. Timothy should revise Gibbs free energy and spontaneity and practical methods for making primary standards as a sound grasp of these concepts are required for the Year 12 Chemistry course. Regular and frequent revision and completion of examination style questions should ensure he has addressed all aspects of the course.

Miss M Hanna

Economics Year 11

Course Outline

During the Preliminary Economics course the students have studied how markets work and what makes them fail. They have investigated both the Australian labour market and financial system. Students have also been introduced to a range of government policy options and have analysed how each of these can affect the Australian economy.

Task	Mark	Weight
Stimulus Based Task	100%	30.00
Financial Markets Research Essay	60%	35.00
Final Examination	80%	35.00

Cumulative Rank: 2/15

Grade: B

Social Development	R	S	U	Commitment to learning	R	S	U
Works cooperatively			✓	Completes tasks in class			✓
Interacts well with teachers and students			✓	Listens attentively and follows instructions			✓
Is self motivated			✓	Brings equipment to class			✓
Demonstrates organisational ability			✓	Completes homework			✓

R = Rarely; S = Sometimes; U = Usually

Teachers Comment:

Timothy is a conscientious student who sets high standards for himself. In the Financial Markets Research Essay, he analysed how the data from the provided charts contributed to an assessment of the Australian economy. Timothy also applied relevant economic terms, concepts, relationships and theory in his essay. He could have improved his results in this task by developing the logical flow of his writing and more clearly explaining the diagrams he chooses to include. In the Final Examination, Timothy achieved a pleasing result especially in the short answer section. Unfortunately, he made some errors in the extended responses which negatively impacted his performance for those questions.

Mr M Roper

Legal Studies Year 11

Course Outline

Year 11 Legal Studies students have continued to develop their understanding of the basic concepts that underpin the Australian legal system. They applied their understanding of law reform to the topic named The Individual and The Law and sought to understand the justice issues that have arisen as a consequence of recent law reform. Students completed their Preliminary Course with the Law in Practice unit, focusing on contemporary issues concerning women and the legal status of Outlaw Motorcycle Gangs.

Task	Mark	Weight
Research and Oral Presentation	87%	30.00
Research-based Essay	76%	35.00
Final Examination	86%	35.00

Cumulative Rank: 5/52

Grade: A

Social Development	R	S	U	Commitment to learning	R	S	U
Works cooperatively			✓	Completes tasks in class			✓
Interacts well with teachers and students			✓	Listens attentively and follows instructions			✓
Is self motivated			✓	Brings equipment to class			✓
Demonstrates organisational ability			✓	Completes homework			✓

R = Rarely; S = Sometimes; U = Usually

Teachers Comment:

Timothy has taken an interest in Legal Studies this year and has asked questions when he needs assistance. In the Research-based Essay, he demonstrated a detailed understanding of the legal implications of technology. Timothy also made a sound judgement of the effectiveness of law reform in protecting rights. He could have improved his result in this task by integrating more relevant legislation, case law and media articles in support of his argument. Timothy's performance in the Final Examination was pleasing, particularly in the multiple choice and extended response sections. His short answer section required more examples to support his answers.

Mr M Roper

Physics Year 11

Course Outline

This semester, students have been investigating wave motion and how it involves the transfer of energy without the transfer of matter. By exploring the properties of waves and the similarities and differences between mechanical waves and electromagnetic waves, students have gained a deeper understanding of the wave model. Students have also examined Thermodynamics to better understand the relationship between energy, work, temperature and matter. In the Electricity and Magnetism module, students have analysed electric charges and unified concepts in understanding the electrical and magnetic properties and behaviour of matter. Students have also examined how the analysis of electrical circuits' behaviour and the transfer and conversion of energy in electrical circuits has led to a variety of technological applications.

Task	Mark	Weight
Practical Task	93%	30.00
Depth Study	88%	30.00
Final Examination	70%	40.00

Cumulative Rank: 3/20

Grade: A

Social Development	R	S	U	Commitment to learning	R	S	U
Works cooperatively			✓	Completes tasks in class			✓
Interacts well with teachers and students			✓	Listens attentively and follows instructions			✓
Is self motivated			✓	Brings equipment to class			✓
Demonstrates organisational ability			✓	Completes homework			✓

R = Rarely; S = Sometimes; U = Usually

Teachers Comment:

Timothy is a diligent student who has demonstrated an extensive understanding of Physics. In the Depth Study he produced a high quality scientific report that indicated a strong ability to conduct an investigation and apply scientific theories in his explanation of results. However, Timothy could make improvements in his analysis of data. His performance in the Final Examination reflected a strong understanding of frictional forces and vector subtraction. Timothy is advised to revise calculations using the inverse square law and power. As he begins the Year 12 course, he is encouraged to develop a regular study routine, using relevant questions from past HSC examinations to develop the quality of his responses.

Mr M Strong

April 2019

**Timothy Long
Year 12**

Timothy Long
April 2019

Pastoral Care

Teacher's Comment

Timothy is a respectful and sociable student who contributes to the activities of our Pastoral Care class. He is commended for his excellent academic achievements in Chemistry and Mathematics Advanced. However, he should consult his classroom teacher's comments to develop strategies to improve outcomes in Legal Studies. In Christian Studies this semester, Timothy has engaged with a range of core Christian doctrines and examined how they relate to everyday life. He is encouraged to reflect and think deeply about how Christian spirituality contributes to his wellbeing and decisions in life. Timothy is also encouraged to maintain his laudable involvement in co-curricular College activities such as his roles in the Student Leadership Team, as a College Prefect and as a College Open Day Tour Guide. He is commended on his excellent attendance record.

Student Leadership Team

College Prefect 2019

College Open Day Tour Guides

Days Absent: 0

Mr D Gawthorne
Pastoral Care Teacher

Mr R. Whelan
Principal

The tasks reported on this report are the tasks detailed in the assessment booklet which was sent home earlier this year. For details of these tasks refer to the booklet.

English Advanced Year 12

Course Outline

Students in 12 English Advanced began the course with the common module, 'Texts and Human Experiences', exploring human paradoxes in the novel 'Nineteen Eighty-Four' or the novella 'Vertigo', and related texts of their choice. In Term 1, students then produced their Multimodal Presentation to reflect their findings in 'Module A: Textual Conversations' concerning the effects of context on the way texts represent values and influence other texts.

Task	Mark	Weight
Pre-circulated Extended Response	90%	20.00
Multimodal Presentation	75%	25.00

Cumulative Rank: 15/94

Social Development	R	S	U	Commitment to learning	R	S	U
Works cooperatively			✓	Completes tasks in class			✓
Interacts well with teachers and students			✓	Listens attentively and follows instructions			✓
Is self motivated			✓	Brings equipment to class			✓
Demonstrates organisational ability			✓	Completes homework		✓	

R = Rarely; S = Sometimes; U = Usually

Teachers Comment:

Timothy is a sociable student who has demonstrated that he can produce excellent results in the Year 12 English Advanced course. His response to the Pre-circulated Extended Response task skilfully sustained a thesis that clearly responded to the question. It could have been improved by increased focus on forms used to represent concepts of the Common Module. Timothy's effective response to the Multimodal Presentation task demonstrated a thorough understanding of Module A, and the poetry of Plath and Hughes. It would have benefited from increased attention to all concepts in the question. His visual presentation enhanced the response by incorporating a range of relevant images, but it should have done so more symbolically and with greater care in arranging elements. Timothy is encouraged to ask questions proactively for greater understanding, seek feedback from his teacher more often and undertake practice responses under timed conditions to prepare for the Trial HSC Examination.

Mr D Gawthorne

Mathematics Advanced Year 12

Course Outline

This semester, students have investigated the Geometrical Applications of Differentiation and Series & Applications topics. They have also studied the processes and techniques encompassed by the Integration and Logarithmic & Exponential Functions topics. These topics were assessed formally via two Common Tests. All of the topics and assessment tasks have been created in conjunction with the outcomes established by the NSW Education Standards Authority.

Task	Mark	Weight
Common Test 1	100%	20.00
Common Test 2	96%	25.00

Cumulative Rank: 2/40

Social Development	R	S	U	Commitment to learning	R	S	U
Works cooperatively			✓	Completes tasks in class			✓
Interacts well with teachers and students			✓	Listens attentively and follows instructions			✓
Is self motivated			✓	Brings equipment to class			✓
Demonstrates organisational ability			✓	Completes homework			✓

R = Rarely; S = Sometimes; U = Usually

Teachers Comment:

Timothy is a committed student who often displays a keen insight into harder mathematical procedures. He has demonstrated a great work ethic in this course and performed brilliantly in both formal assessment tasks. In these tasks, he showed a high level of proficiency in solving problems related to financial annuity, differential calculus and the manipulation of logarithms, exponentials and integration. Timothy should continue to maintain his level of preparation for the final examinations through regular revision of coursework and sitting past papers under time constraints.

Mr D Butler

Mathematics Extension 1 Year 12

Course Outline

This semester, Year 12 Mathematics Extension 1 students have covered work on Mathematical Induction, Polynomials, Further Integration, Further Graphing and Harder Mathematics. These topics were assessed formally via an in class test. All of the topics and assessment tasks have been created in conjunction with the outcomes established by the NSW Education Standards Authority.

Task	Mark	Weight
Common Test	85%	35.00

Cumulative Rank: 2/16

Social Development	R	S	U	Commitment to learning	R	S	U
Works cooperatively			✓	Completes tasks in class			✓
Interacts well with teachers and students			✓	Listens attentively and follows instructions			✓
Is self motivated			✓	Brings equipment to class			✓
Demonstrates organisational ability			✓	Completes homework			✓

R = Rarely; S = Sometimes; U = Usually

Teachers Comment:

Timothy is an enthusiastic student who genuinely enjoys the study of Mathematics Extension 1. He works independently in classes in a responsible manner and also collaborates exuberantly with his peers. Timothy performed well in the Common Test, improving significantly from his last assessment task for this course. He displayed mastery over the integration by substitution and mathematical induction concepts that were assessed. Some further review of harder graphing techniques and the Polynomials 2 topic would be beneficial. Timothy is commended for seeking assistance when his understanding is challenged. He is encouraged to expand his study materials, so that he has a large collection of resources to draw on in preparation for examinations and to familiarise himself with HSC style questioning.

Mr D Butler

Chemistry Year 12

Course Outline

This semester, students have been investigating open and closed systems and their implications for equilibrium reactions. They have analysed the quantitative relationship between products and reactants in an equilibrium reaction to calculate the equilibrium constant for a range of reactions. Students have applied Le Chatelier's principle to predict the shift in equilibrium under certain changes in conditions of the chemical system. In the Acids and Bases module, students analysed why the definitions of acids and bases have been modified throughout history. They have characterised and explained the behaviour of acids and bases in chemical reactions. Students applied quantitative methods to calculate pH, hydrogen ion concentration and the equilibrium constants for acidic and basic substances.

Task	Mark	Weight
Practical Task	89%	25.00
Topic Test	82%	15.00

Cumulative Rank: 4/23

R = Rarely; S = Sometimes; U = Usually

Teachers Comment:

Timothy is a conscientious and enthusiastic member of the class. He has achieved very good results in Chemistry this semester. Timothy has demonstrated a thorough understanding of the concepts covered in the course, including equilibrium, Le Chatelier's principle and the behaviour of acids and bases. In the Practical Task, Timothy constructed an accurate standard curve using colourimetry to determine the concentration of unknown solutions of salicylic acid. He analysed his data and calculated the concentration of salicylic acid in an aspirin tablet. In the Topic Test, Timothy succinctly explained changes in concentrations of an equilibrium system, calculated molar heat of neutralisation and wrote chemical equations to show the amphoteric nature of a named chemical. He is encouraged to focus on the finer detail required when structuring his answers. To improve, Timothy is encouraged to continue his focused approach to class work, ask for clarification and practise a range of HSC style questions with a focus on applying content knowledge to complex scenarios.

Miss M Hanna

Legal Studies Year 12

Course Outline

This semester in Legal Studies, students completed their study of the compulsory core units in HSC Legal Studies. This began with the Human Rights unit, examining the development of rights, as well as the current status and protection of human rights both internationally and within Australia. This study included a particular focus on the contemporary human rights issue of 'Slavery and Human Trafficking'. Students then completed the Crime unit, which involved a study of the nature of the Australian criminal justice system, including the role of police and courts in achieving justice.

Task	Mark	Weight
Human Rights Research Task	85%	20.00
Crime Research Report	70%	20.00

Cumulative Rank: 10/40

Social Development	R	S	U	Commitment to learning	R	S	U
Works cooperatively			✓	Completes tasks in class			✓
Interacts well with teachers and students			✓	Listens attentively and follows instructions			✓
Is self motivated			✓	Brings equipment to class			✓
Demonstrates organisational ability			✓	Completes homework			✓

R = Rarely; S = Sometimes; U = Usually

Teachers Comment:

Timothy actively engages in his learning and collaborates well with others. In the Human Rights Research Task, he demonstrated a detailed knowledge of child soldiers and made a substantial judgement of the effectiveness of legal and non-legal responses to the issue. Timothy could have improved his assessment by including more supporting details and statistics to examine the extent of the human rights issue globally. In the Crime Research Report, he used criteria to support his evaluation of the law reform of police powers. Timothy is encouraged to develop his skills in writing a sustained response that consistently engages with the question through past Higher School Certificate questions.

Mr M Roper

Physics Year 12

Course Outline

This Semester, Physics students have studied the topics Advanced Mechanics and Electromagnetism. They have used formulae to analyse projectile motion, circular motion and motion in gravitational fields. The changes in gravitational potential energy and kinetic energy for various satellites were also explored. Students investigated electrical and magnetic fields and developed an understanding of the application of the Lenz's Law in electrical motors and generators.

Task	Mark	Weight
Practical Task	89%	25.00
Module Test	76%	15.00

Cumulative Rank: 5/16

Social Development	R	S	U	Commitment to learning	R	S	U
Works cooperatively			✓	Completes tasks in class			✓
Interacts well with teachers and students			✓	Listens attentively and follows instructions			✓
Is self motivated			✓	Brings equipment to class			✓
Demonstrates organisational ability			✓	Completes homework			✓

R = Rarely; S = Sometimes; U = Usually

Teachers Comment:

Timothy is a determined student who has demonstrated an excellent understanding of Physics this semester. In the Practical Task, he showed an outstanding ability to derive equations and use the gradient of the line of best fit to determine the relationship between variables. Timothy is encouraged to practise writing concise aims and conclusions and should remember to include all the necessary conventions when drawing graphs. In the Module Test, he exhibited a thorough understanding of the Electromagnetism topic. Timothy should revise the application of back EMF in electrical motors. He is encouraged to maintain a regular study routine that includes writing detailed summary notes and answering past HSC questions to improve the quality of his responses.

Year 12**

Timothy Long
September 2019

Pastoral Care

Teacher's Comment

Timothy has consistently presented to staff and peers as a friendly and motivated student. He is commended for his outstanding academic achievements in Chemistry, Mathematics Advanced, Physics and Mathematics Extension 1. Timothy should now practise strategies for revision highlighted by the Trial HSC Examinations, in order to prepare for the HSC Examinations. In particular, he should engage with the assistance offered by his teachers to refine his approach to English Advanced and Legal Studies. Timothy has engaged positively with the activities of our Pastoral Care class, interacting well with classmates. In Christian Studies this semester, he engaged in discussions on core Christian doctrines and ideas. Through this, Timothy was encouraged to consider how character and faith interact in life beyond College. He is encouraged to further explore and reflect on the positive impact that a faith in Christ can have. Timothy has made substantial contributions to the life of the College through service in student leadership, participation in activities serving the popularisation of science, active engagement in House activities, and attention to the social and academic support of peers. He is also commended for his exemplary attendance record. I wish him well in his future pursuits.

Pastoral Care Teacher

Mr R. Whelan
Principal

The tasks reported on this report are the tasks detailed in the assessment booklet which was sent home earlier this year. For details of these tasks refer to the booklet.

English Advanced Year 12

Course Outline

In their final semester of the HSC English Advanced course, students have completed a study on the Craft of Writing, exploring and adapting the style and technique of published authors to compose imaginative, discursive and reflective responses. Students also completed a Critical Study on Shakespeare's King Henry IV, Part 1. They have completed a Reading and Writing task and the Trial HSC Examination.

Task	Mark	Weight
Pre-circulated Extended Response	90%	20.00
Multimodal Presentation	75%	25.00
Reading & Writing	73%	25.00
Trial HSC Examination	83%	30.00

Cumulative Rank: 19/95

Social Development	R	S	U	Commitment to learning	R	S	U
Works cooperatively			✓	Completes tasks in class			✓
Interacts well with teachers and students			✓	Listens attentively and follows instructions			✓
Is self motivated			✓	Brings equipment to class			✓
Demonstrates organisational ability			✓	Completes homework			✓

R = Rarely; S = Sometimes; U = Usually

Teachers Comment:

Timothy has sustained a consistently positive approach to the Year 12 English Advanced course and has been rewarded with some outstanding results. His imaginative response in the Reading and Writing task employed effective imagery. However, Timothy's discursive response would have benefited from more insightful factual content and the reflection response required explicitly evaluative language. In the Trial HSC Examination, his solid reading responses could have been improved by balanced treatment of compared texts. Timothy's excellent extended response for the Common Module engaged frequently with the question, but should have done so more comprehensively. His insightful Module A extended response also engaged with the question, but might have also had more fluent expression. Timothy's Module B extended response would have benefited from clearer explanation of connections between analysis and its thesis. Towards improving on all results, he should attempt practice responses for all sections under examination conditions, and seek teacher and peer feedback. It has been a pleasure to support Timothy in taking initiative for his learning and I wish him well for future endeavours.

Mr D Gawthorne

Mathematics Advanced Year 12

Course Outline

This year, students of Year 12 Mathematics have studied the following topics: Probability, Trigonometric Functions, Logarithmic & Exponential Functions, Series & Series Applications, Integration, Geometrical Applications of Differentiation, Applications of Calculus to the Physical World and Geometry II. These topics were formally assessed by four formal assessment tasks. All of the topics and assessment tasks have been created in conjunction with the outcomes established by the NSW Education Standards Authority.

Task	Mark	Weight
Common Test 1	100%	20.00
Common Test 2	96%	25.00
Summary & Test	100%	25.00
Trial HSC Examination	85%	30.00

Cumulative Rank: 2/39

Social Development	R	S	U	Commitment to learning	R	S	U
Works cooperatively			✓	Completes tasks in class			✓
Interacts well with teachers and students			✓	Listens attentively and follows instructions			✓
Is self motivated			✓	Brings equipment to class			✓
Demonstrates organisational ability			✓	Completes homework			✓

R = Rarely; S = Sometimes; U = Usually

Teachers Comment:

Timothy has approached this course with enthusiasm and maturity. He maintains very high standards in his work and enjoys the challenge of problem solving. Timothy demonstrated a high level of competence in the areas of Arithmetic, Algebra, Real Functions, Series, Tangents & Derivatives, Trigonometry and Applications of Calculus. He is a respectful and charismatic student who works diligently in completing all set tasks. Some further review of Logs & Exponentials and Probability would be beneficial prior to the HSC Examination. Timothy is commended for the way he has conducted himself over the duration of the Stage 6 Mathematics course.

Mr D Butler

Mathematics Extension 1 Year 12

Course Outline

This year, students of Year 12 Mathematics Extension 1 have studied Mathematical Induction, Polynomials, Further Integration, Further Trigonometry, Binomial Theorem, Inverse Functions & Inverse Trigonometric Functions, Harder Applications of Mathematics and Further Applications of Calculus to the Physical World such as Simple Harmonic Motion and Projectile Motion. These topics were formally assessed by four formal assessment tasks. All of the topics and assessment tasks have been created in conjunction with the outcomes established by the NSW Education Standards Authority.

Task	Mark	Weight
Common Test	85%	35.00
Summary & Test	98%	35.00
Trial HSC Examination	81%	30.00

Cumulative Rank: 2/15

Social Development	R	S	U	Commitment to learning	R	S	U
Works cooperatively			✓	Completes tasks in class			✓
Interacts well with teachers and students			✓	Listens attentively and follows instructions			✓
Is self motivated			✓	Brings equipment to class			✓
Demonstrates organisational ability			✓	Completes homework			✓

R = Rarely; S = Sometimes; U = Usually

Teachers Comment:

Timothy is a motivated and resourceful student who enjoys the study of Mathematics Extension 1. He is often responsible when working independently, enjoys the process of collaboration and seeks assistance when needed. Timothy thoroughly prepares for examinations and performed well in the Trial HSC Examination, displaying high levels of competence in the areas of Integration and Newton's Method. Further revision of the Binomial Theorem and the Further Applications of Calculus to the Physical World would be beneficial in preparation for the HSC Examination and some rehearsal under time pressure should minimise his careless errors. Timothy is commended for his positive contributions to class, his respectful attitude and his optimistic outlook. I wish him every success for the future.

Mr D Butler

Chemistry Year 12

Course Outline

This semester, students have studied the identification and analysis of chemicals that are important in research, medicine, environmental management, quality control and mining. They have learnt the structures, properties and uses of a range of organic compounds and investigated the applications of these in the synthesis of new chemicals. Students have analysed the range of reactions undergone by organic substances and classified these reactions according to type.

Task	Mark	Weight
Practical Task	89%	25.00
Topic Test	82%	15.00
Depth Study	92%	30.00
Trial HSC Examination	66%	30.00

Cumulative Rank: 7/22

Social Development	R	S	U	Commitment to learning	R	S	U
Works cooperatively			✓	Completes tasks in class			✓
Interacts well with teachers and students			✓	Listens attentively and follows instructions			✓
Is self motivated			✓	Brings equipment to class			✓
Demonstrates organisational ability			✓	Completes homework			✓

R = Rarely; S = Sometimes; U = Usually

Teachers Comment:

Timothy is a friendly student who has achieved pleasing results in Chemistry this semester. He has a good knowledge of course content and asks relevant questions in class. In the Depth Study on Organic Chemistry, Timothy demonstrated an excellent understanding of ionic solubility, esterification and the sociocultural implications of using organic compounds. In the Trial HSC Examination, he accurately calculated equilibrium constants and molar enthalpy of neutralisation, explained how the definition of acids has developed over time and described how to prepare an ester in the laboratory. To improve, Timothy should revise organic synthesis pathways and continue applying the skills he has developed in preparation for the HSC Examination. He has been a pleasure to teach and I wish the best for him in his future endeavours.

Miss M Hanna

Legal Studies Year 12

Course Outline

This semester, Year 12 Legal Studies students have completed two option units on Consumer Law and Family Law. They examined the relevant law in each area, considering the effectiveness of the justice system in responding to issues and achieving justice. Students have developed their extended response writing skills as they seek to evaluate the effectiveness of the law in each area studied.

Task	Mark	Weight
Human Rights Research Task	85%	20.00
Crime Research Report	70%	20.00
Consumer Law Review	80%	30.00
Trial HSC Examination	76%	30.00

Cumulative Rank: 6/40

Social Development	R	S	U	Commitment to learning	R	S	U
Works cooperatively			✓	Completes tasks in class			✓
Interacts well with teachers and students			✓	Listens attentively and follows instructions			✓
Is self motivated			✓	Brings equipment to class			✓
Demonstrates organisational ability			✓	Completes homework			✓

R = Rarely; S = Sometimes; U = Usually

Teachers Comment:

Timothy is a polite and pleasant student who has maintained a focused approach to his studies. In the Consumer Law Review hand-in component, he demonstrated an extensive knowledge and understanding of the legal issues relevant to the four topics he researched. In the in-class component, Timothy made a sound judgement as to the effectiveness of the law in promoting cooperation and resolving consumer conflict. He could have improved his assessment by including a more in-depth analysis of the legal evidence he used to support his argument. In the Trial HSC Examination, Timothy wrote three logical and detailed essays that strongly engaged with the questions asked. His performance in the examination highlighted a need to improve the accuracy of his knowledge of criminal law, as this let him down in the multiple choice section. Timothy has been a pleasure to teach due to his positive work ethic and organisation.

Mr M Roper

Physics Year 12

Course Outline

This semester students have studied the Electromagnetic Spectrum and the wave and particle properties of light. They have also investigated the consequences of the constancy of the speed of light in terms of Einstein's Special Relativity. In the Universe to the Atom module, students have learnt about the origins of matter and investigated how the laws of quantum mechanics hold the atom together.

Task	Mark	Weight
Practical Task	89%	25.00
Module Test	76%	15.00
Depth Study	96%	30.00
Trial HSC examination	79%	30.00

Cumulative Rank: 3/15

Social Development	R	S	U	Commitment to learning	R	S	U
Works cooperatively			✓	Completes tasks in class			✓
Interacts well with teachers and students			✓	Listens attentively and follows instructions			✓
Is self motivated			✓	Brings equipment to class			✓
Demonstrates organisational ability			✓	Completes homework			✓

R = Rarely; S = Sometimes; U = Usually

Teachers Comment:

Timothy is a determined student who has demonstrated an extensive understanding of Physics this semester. In the Depth Study, he showed an extensive knowledge across all aspects of the task. Timothy could improve his analysis of the experiments that changed the model of the atom throughout history. In the Trial HSC Examination, he clearly explained the practical application of absorption spectra and performed correct calculations using Wein's Law and Newton's Universal Gravitational Law. Timothy should revise torque in electric motors and the energies carried by particles in nuclear transmutations. I encourage him to maintain his disciplined approach towards revision and he should continue using past HSC examinations to develop the quality of his written responses. Timothy has been a pleasure to teach and I wish the best for him in his future endeavours.

Mr M Strong
