

SCOTCH COLLEGE

Year 12 WACE Report
2017 Semester 1

Cameron Riseley

Year 12 Cameron

Chemistry - ATAR

Grade A

Examination Mark **86**
Examination Average **71**

Course Mark **80**
Course Average **68**

Cameron's performance in the multiple-choice section of the examination was very encouraging. In the short-answer section of the examination, which tests knowledge rather like the multiple-choice section, but without the answers being there to see, Cameron did impressively well in all topics. Having said that, he would benefit from practising questions that ask him to describe observations in chemical tests. In the final section of the examination, where students are required to provide longer written answers and solve multiple-step calculations, Cameron performed a satisfactory understanding of the topics covered and an ability to express himself clearly in his mathematical working. He would benefit from setting out his explanations more clearly and perhaps using dot points to avoid the risk of contradicting himself or wandering off the point. On the whole, Cameron's examination performance was extremely pleasing and I hope he will be able to maintain his form this semester. More generally, Cameron has had an excellent first semester in Chemistry. He can always be relied upon to have his notes ready at the start of a week. In order to improve further Cameron should focus on improving the organisation of his notes. A longer-term view towards his work will be of huge benefit to him now and when he leaves school. Just because something is understood in the short term does not guarantee that it will appear simple after a period of not using that knowledge. He is more than welcome to meet with me outside of class, be that before or after school, as he approaches the final stages of the course. It has been a privilege to have a young man with Cameron's eye for detail in the class and the way he has conducted himself has been a great credit to him. It is great to see him achieving scores that reflect his ability and I hope that he will continue to raise the bar in the final few months of the course.

Mr T P Iwanowski

English - ATAR

Grade A

Examination Mark **73**
Examination Average **60**

Course Mark **78**
Course Average **63**

Cameron is a bright and self-motivated student who has demonstrated an excellent understanding of English this semester. He has made pleasing progress with the clarity and conciseness of his written expression, as well as in developing the depth of his technical analyses. Continued focus in this area, specifically on the conventions of genre, should assist Cameron within his narrative and persuasive compositions. Within the examination Cameron expressed himself clearly and displayed his strong technical analysis skills. He should aim to provide greater detail and balance on all requirements of the questions.

Miss K Gooding

Mathematics: Methods - ATAR

Grade A

Examination Mark **88**
Examination Average **65**

Course Mark **89**
Course Average **68**

Cameron has completed a very pleasing semester of study in this subject. His examination result was very strong and indicates that he has a good understanding of what he is studying and that he prepared well for this major assessment, which is fantastic. Analysis of his paper demonstrates that he did not perform as well in Exponential Functions and Rectilinear Motion; although these were some of the more difficult questions. I am confident that Cameron will make any adjustments necessary to remedy this. For the remainder of the year, Cameron is encouraged to maintain his efforts and interest in the subject. He has the potential to score very highly in this subject and maintaining focus should almost ensure further success. Cameron has been a pleasure to teach thus far.

Mr R Foster

Mathematics: Specialist - ATAR

Grade A

Examination Mark **79**
Examination Average **76**

Course Mark **82**
Course Average **73**

Cameron approaches his Mathematics work in a quiet manner, completing all set work independently. He listens attentively when new topics and strategies are being taught and questions these methods until he fully understands them and the process is clear to him. He works hard to practise the skills learned and will often be able to use his own techniques to solve a complex question. Whilst he demonstrated a sound understanding of all of the topics in the examination, his result was lower than his average for the course. He should use his revision guide throughout Semester 2 to continually practise examination style questions to improve his technique. Where possible he should attempt to do so in examination conditions to aid with time management. With his strong work ethic and ability, I hope Cameron achieves the results he is striving for at the end of the year.

Mrs J A Langley

Physics - ATAR

Grade A

Examination Mark **78**Examination Average **64**Course Mark **80**Course Average **67**

I have been very pleased by the manner in which Cameron has conducted himself so far this semester. He has applied himself fully to the demands of this subject and his test results, practical work and assignment work have all been completed to a pleasing level. His examination mark, however, was less than I expected, so he will need to improve on his examination preparation before the final series of examinations.

Mr R W Reberger
